

Enable pop-ups in Mozilla Firefox

Pop-ups used to be the bane of internet browsing. They'd come at you from every angle and refuse to budge. Closing them was a fruitless endeavor. Years have passed since those dark times, and virtually all browsers disable pop-ups by default. Chrome is no exception. Sometimes you need pop-ups though, so follow this guide to allow them for the sites you trust.

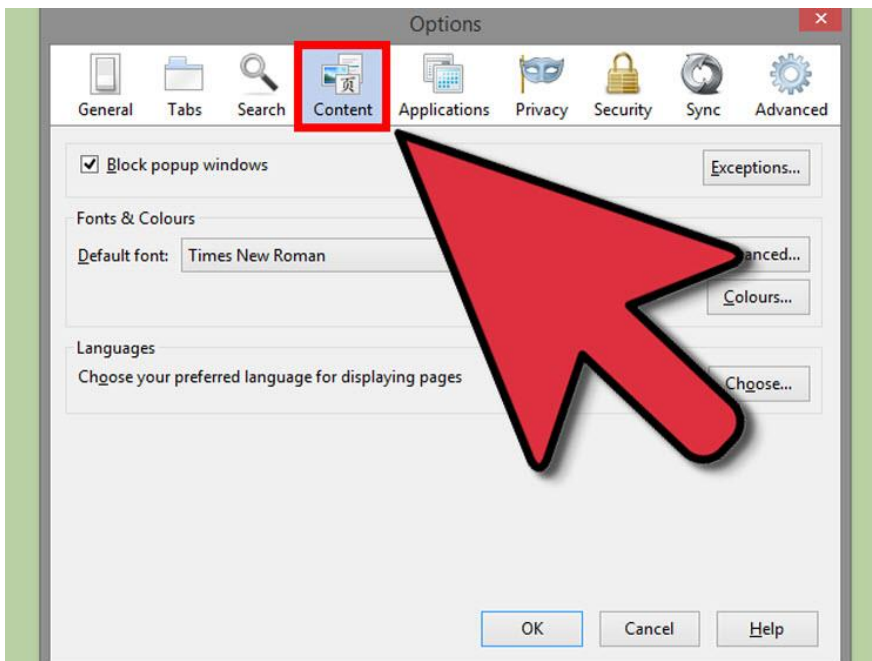

1

Open the Firefox menu after opening the browser.

2

Select "Preferences."

3

Navigate to the Content tab.

4

On the first option, uncheck the "Block pop-up windows" box. This will disable the popup blocker function.

5

If you want to choose which websites to allow and still keep the blocker functionality, to the right, choose "exceptions" instead. Write down a list of websites you don't want Firefox to automatically block.

WARNINGS

- When you allow pop-ups on Google Chrome your computer may slow down or freeze (stop functioning). Some pop-ups can contain animation or videos that automatically start playing when the pop-up opens. This hogs your Internet speed and computer hardware causing slow web browsing or possible operating system crashes.
